

Quick Installation Guide

Cloud-Managed Wireless Ceiling Access Point

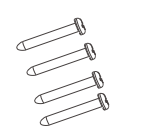

Wi-AP217 | Wi-AP217-Lite | Wi-AP218AX-Lite | Wi-AP219AX-Lite
Hardware Version: V2.0

www.wireless-tek.com

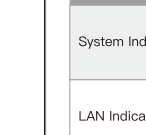

1.Packing Content

1 × AP

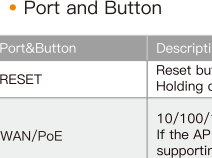

4 × Plastic Anchor

4 × Self-Tapping Screws

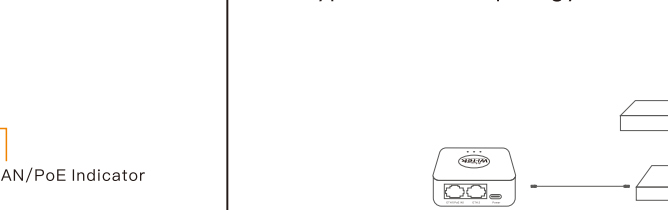

1 × Ethernet Cable

1 × Quick Installation Guide

2. Appearance Overview

• LED indicator

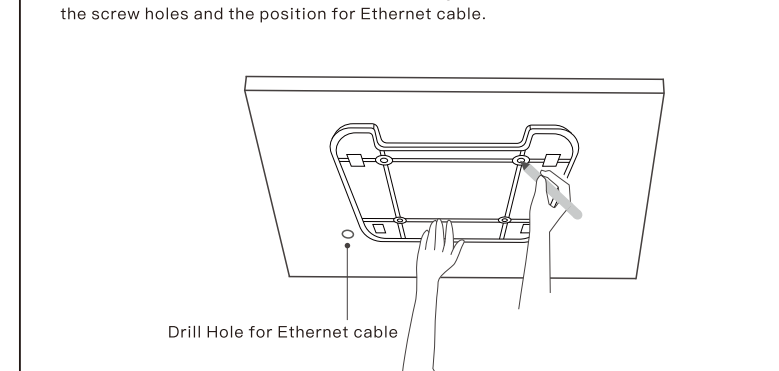

LED Indicators	Status	Description
System Indicator	Off	The device is powered off.
	On	The system is working normally.
LAN Indicator	Off	The LAN port is disconnected.
	On	The LAN port is connected via Ethernet cable.
WAN/PoE Indicator	Off	The port is disconnected.
	On	The port is connected via Ethernet cable.

• Port and Button

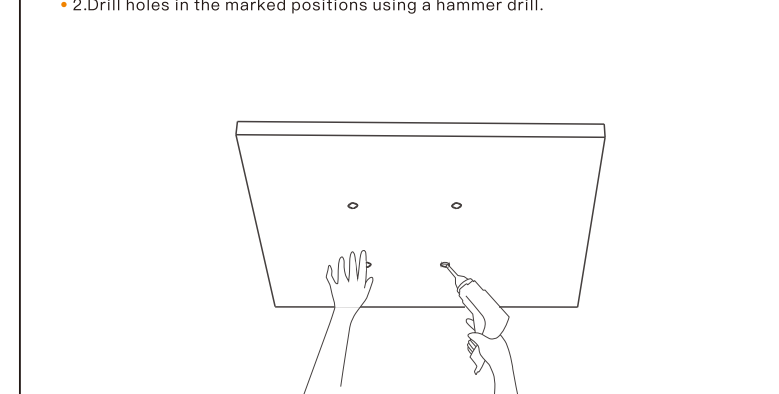

Port&Button	Description
RESET	Reset button, which is used to restore the factory. Holding down the reset button for 10 seconds to revert to factory settings.
WAN/PoE	10/100/1000Mbps Base-T Ethernet Port, which supports 802.3af/at PoE Input. If the AP is powered through PoE, please connect this port to the PoE switch supporting 802.3af output. It is generally connected to the upstream switch.
LAN	10/100/1000Mbps Base-T Ethernet port. It is generally to connected to wired LAN devices such as PC.
DC	DC Input: 12V,1A The AP is powered through 12V DC Input.

3. Typical Connection

• Bypass mode topology

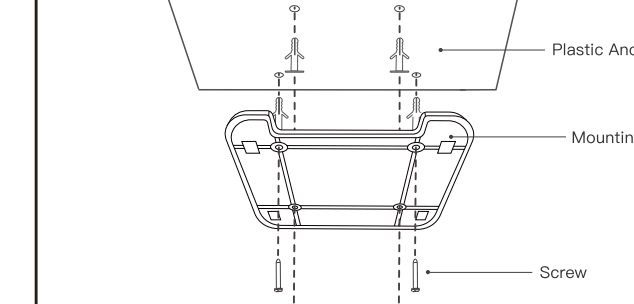

• AC Gateway mode topology

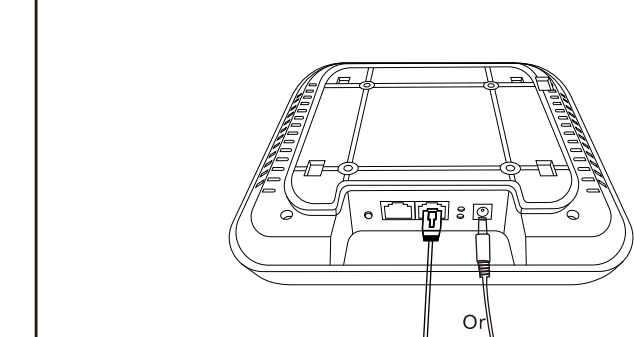

4. Device Installation

• Ceiling Mounting

- 1.Place the bracket in the center of the ceiling and then mark the positions for the screw holes and the position for Ethernet cable.

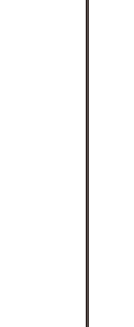

- 2.Drill holes in the marked positions using a hammer drill.

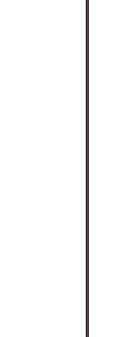

• Power the AP

- 3.Knock the plastic anchors into the holes by using the rubber hammer. Align the screw holes in the bracket with the holes in the ceiling and use the self-tapping screws to fix the bracket.

- 4.Power the AP by connecting a PoE switch to the WAN/PoE port or a power adapter to the 12V DC Input port.

5. Power Supply

• Power via PSE Device

- The APs can be powered via PoE switch which supports 802.3af PoE output.

• Power via Power adapter

- Some APs can be powered via power adapter which supports 12V DC output.

6. Configuration Method

Method 1.

Connect computer to the wireless signal of AP, the default SSID is "Wi-TEK xxxx". Password is 88888888.

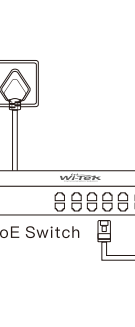

Method 2.

Connect computer to the AP by Ethernet cable.

Step 1.

On the computer, please set the static IP under the same subnet with AP, 192.168.1.xx

Step 2.

Please launch a browser such as Google Chrome or Firefox, type 192.168.1.88 into address bar and click on enter to get in the login page of wireless access point. The default login password is "admin".

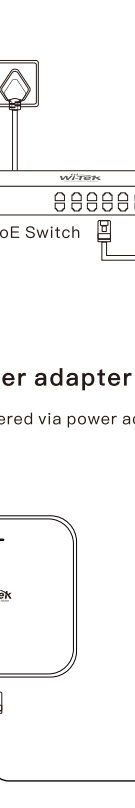

Step 3.

After get in the management page, On the left side menu, please go to [Wireless] to setup the access point

Step 4.

After completing the steps above, you can configure your network.

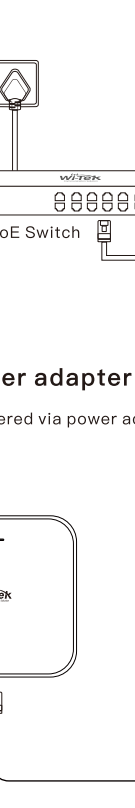

Step 5.

After finishing configuring the network, the network is now up.

Step 6.

After finishing configuring the network, the network is now up.

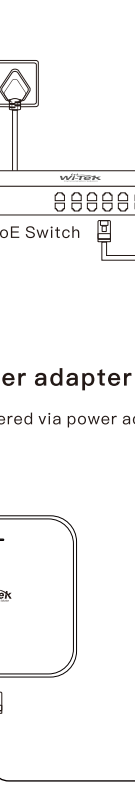

Step 7.

After finishing configuring the network, the network is now up.

Step 8.

After finishing configuring the network, the network is now up.

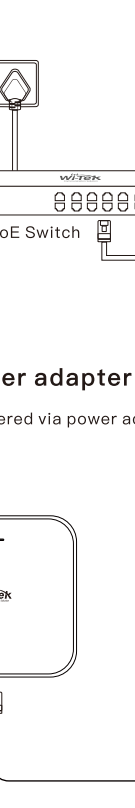

Step 9.

After finishing configuring the network, the network is now up.

Step 10.

After finishing configuring the network, the network is now up.

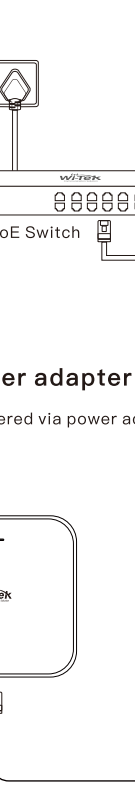

Step 11.

After finishing configuring the network, the network is now up.

Step 12.

After finishing configuring the network, the network is now up.

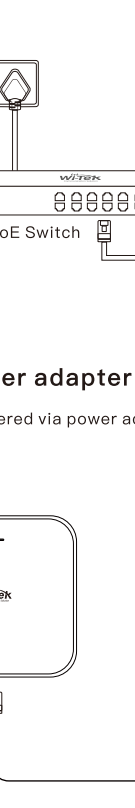

Step 13.

After finishing configuring the network, the network is now up.

Step 14.

After finishing configuring the network, the network is now up.

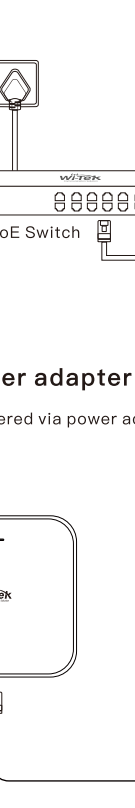

Step 15.

After finishing configuring the network, the network is now up.

Step 16.

After finishing configuring the network, the network is now up.

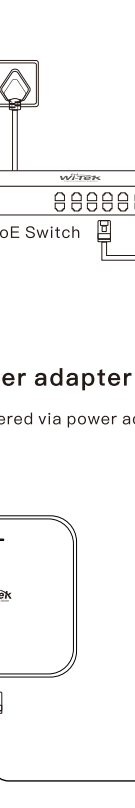

Step 17.

After finishing configuring the network, the network is now up.

Step 18.

After finishing configuring the network, the network is now up.

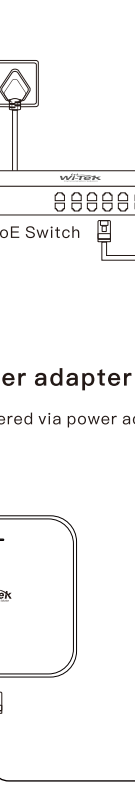

Step 19.

After finishing configuring the network, the network is now up.

Step 20.

After finishing configuring the network, the network is now up.

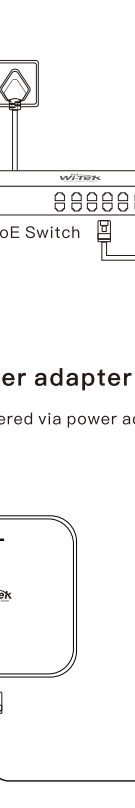

Step 21.

After finishing configuring the network, the network is now up.

Step 22.

After finishing configuring the network, the network is now up.

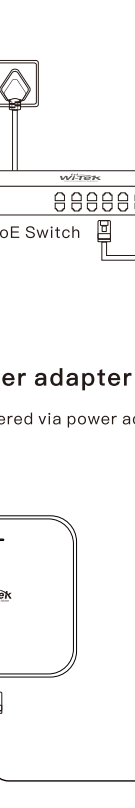

Step 23.

After finishing configuring the network, the network is now up.

Step 24.

After finishing configuring the network, the network is now up.

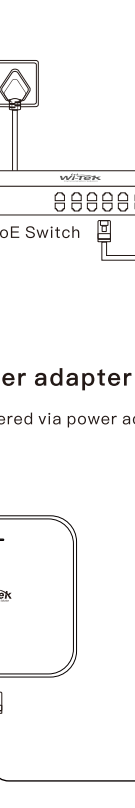

Step 25.

After finishing configuring the network, the network is now up.

Step 26.

After finishing configuring the network, the network is now up.

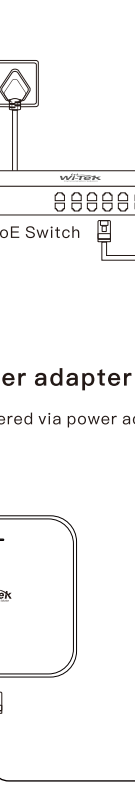

Step 27.

After finishing configuring the network, the network is now up.

Step 28.

After finishing configuring the network, the network is now up.

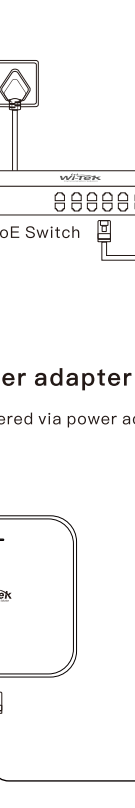

Step 29.

After finishing configuring the network, the network is now up.

Step 30.

After finishing configuring the network, the network is now up.

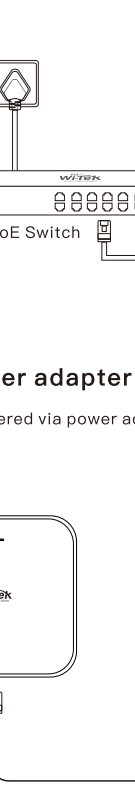

Step 31.

After finishing configuring the network, the network is now up.

Step 32.

After finishing configuring the network, the network is now up.

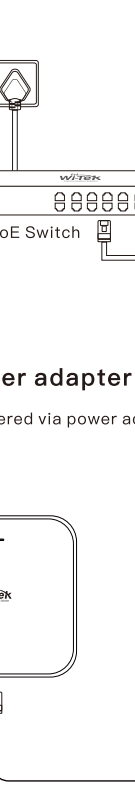

Step 33.

After finishing configuring the network, the network is now up.

Step 34.

After finishing configuring the network, the network is now up.

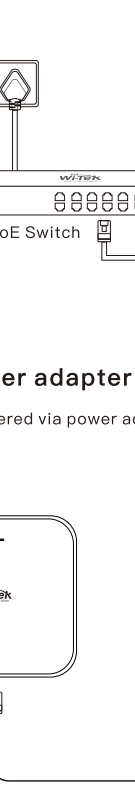

Step 35.

After finishing configuring the network, the network is now up.

Step 36.

After finishing configuring the network, the network is now up.

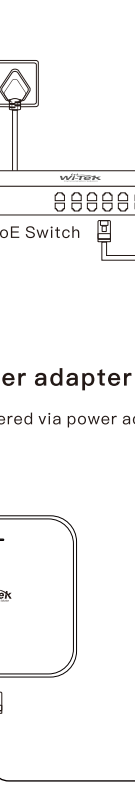

Step 37.

After finishing configuring the network, the network is now up.

Step 38.

After finishing configuring the network, the network is now up.

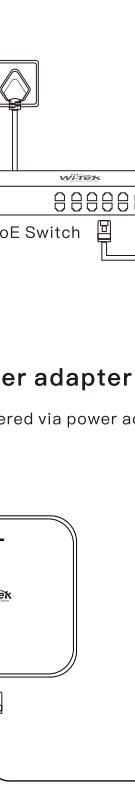

Step 39.

After finishing configuring the network, the network is now up.

Step 40.

After finishing configuring the network, the network is now up.

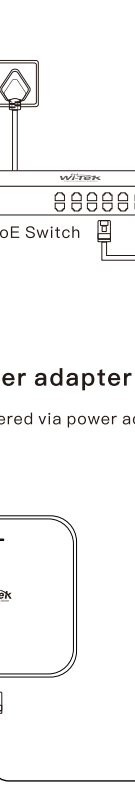

Step 41.

After finishing configuring the network, the network is now up.

Step 42.

After finishing configuring the network, the network is now up.

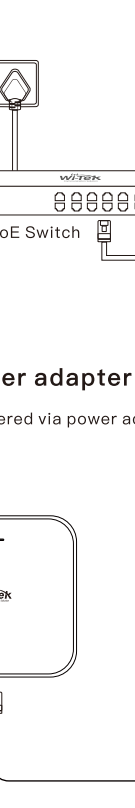

Step 43.

After finishing configuring the network, the network is now up.

Step 44.

After finishing configuring the network, the network is now up.

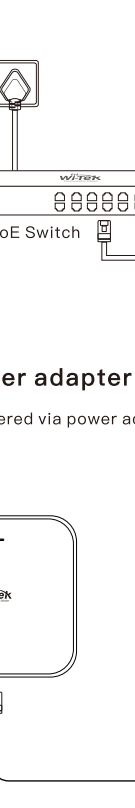

Step 45.

After finishing configuring the network, the network is now up.

Step 46.

After finishing configuring the network, the network is now up.

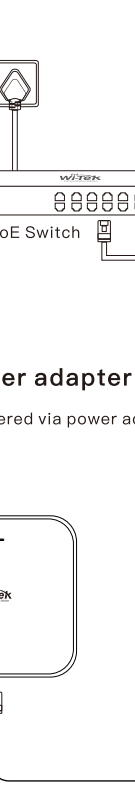

Step 47.

After finishing configuring the network, the network is now up.

Step 48.

After finishing configuring the network, the network is now up.

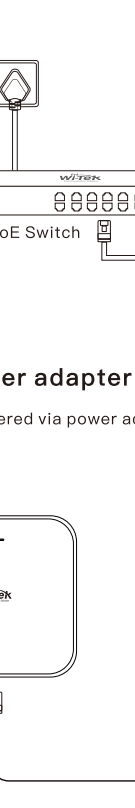

Step 49.

After finishing configuring the network, the network is now up.

Step 50.

After finishing configuring the network, the network is now up.

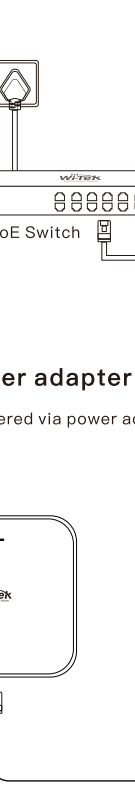

Step 51.

After finishing configuring the network, the network is now up.

Step 52.

After finishing configuring the network, the network is now up.

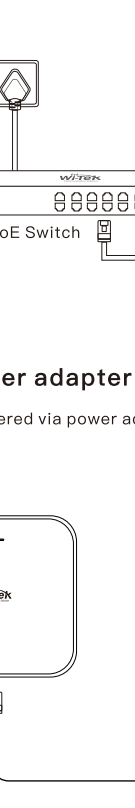

Step 53.

After finishing configuring the network, the network is now up.

Step 54.

After finishing configuring the network, the network is now up.

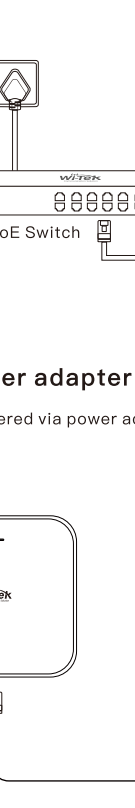

Step 55.

After finishing configuring the network, the network is now up.

Step 56.

After finishing configuring the network, the network is now up.

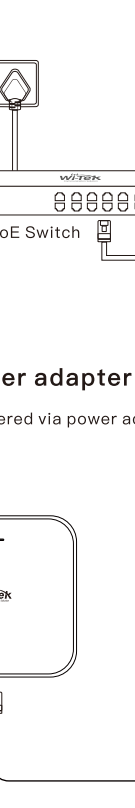

Step 57.

After finishing configuring the network, the network is now up.

Step 58.

After finishing configuring the network, the network is now up.

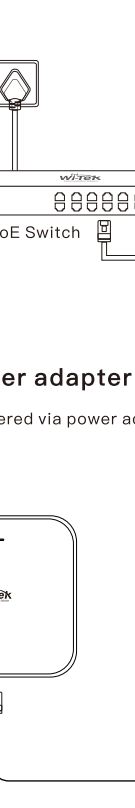

Step 59.

After finishing configuring the network, the network is now up.

Step 60.

After finishing configuring the network, the network is now up.

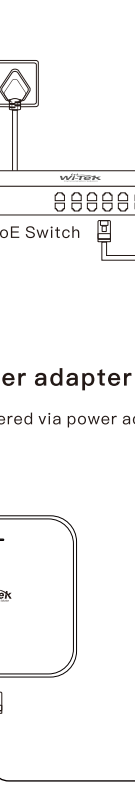

Step 61.

After finishing configuring the network, the network is now up.

Step 62.

After finishing configuring the network, the network is now up.

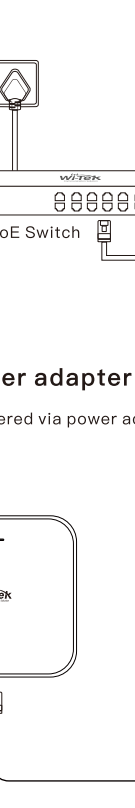

Step 63.

After finishing configuring the network, the network is now up.

Step 64.

After finishing configuring the network, the network is now up.

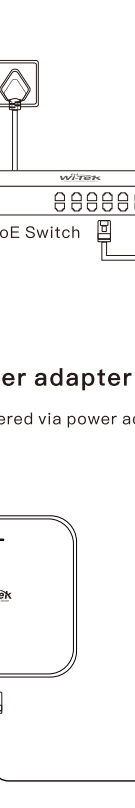

Step 65.

After finishing configuring the network, the network is now up.

Step 66.

After finishing configuring the network, the network is now up.

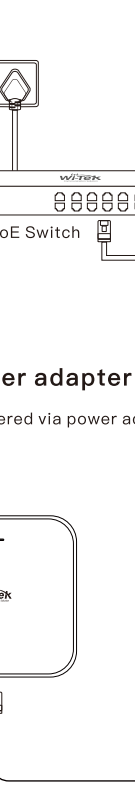

Step 67.

After finishing configuring the network, the network is now up.

Step 68.

After finishing configuring the network, the network is now up.

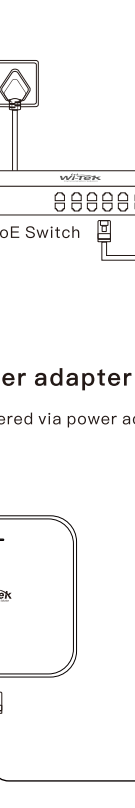

Step 69.

After finishing configuring the network, the network is now up.

Step 70.

After finishing configuring the network, the network is now up.

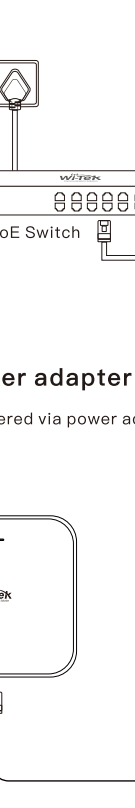

Step 71.

After finishing configuring the network, the network is now up.

Step 72.

After finishing configuring the network, the network is now up.

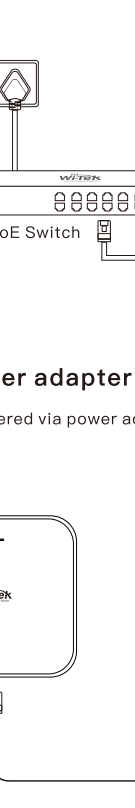

Step 73.

After finishing configuring the network, the network is now up.

Step 74.

After finishing configuring the network, the network is now up.

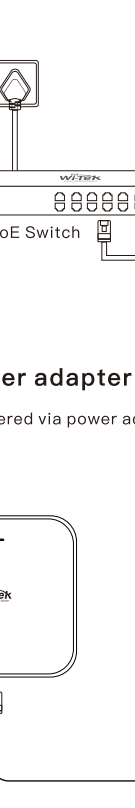

Step 75.

After finishing configuring the network, the network is now up.

Step 76.

After finishing configuring the network, the network is now up.

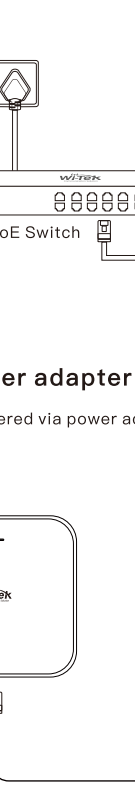

Step 77.

After finishing configuring the network, the network is now up.

Step 78.

After finishing configuring the network, the network is now up.

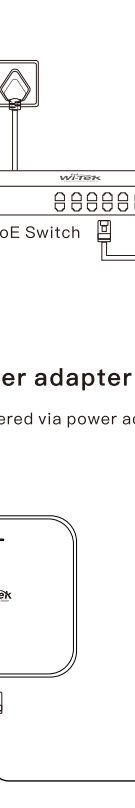

Step 79.

After finishing configuring the network, the network is now up.

Step 80.

After finishing configuring the network, the network is now up.

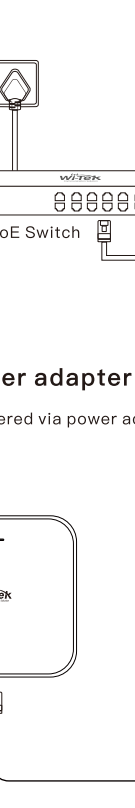

Step 81.

After finishing configuring the network, the network is now up.

Step 82.

After finishing configuring the network, the network is now up.

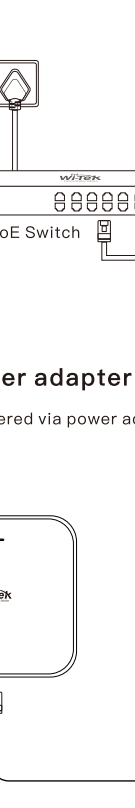

Step 83.

After finishing configuring the network, the network is now up.

Step 84.

After finishing configuring the network, the network is now up.

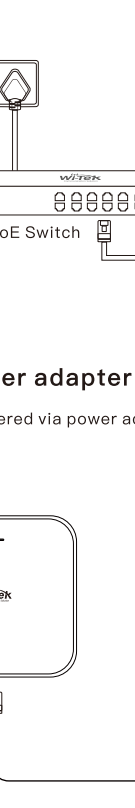

Step 85.

After finishing configuring the network, the network is now up.

Step 86.

After finishing configuring the network, the network is now up.

Step 87.

After finishing configuring the network, the network is now up.

Step 88.

After finishing configuring the network, the network is now up.
